04 — Open-Source & Tool Registry

Inventory policy

Preserve every user-supplied project even when overlapping. Classify each as Primary, Secondary, Fallback, Experimental, Archived, Deprecated or Needs Verification.

Do not call a project open source solely because it is on GitHub. Verify repository license, source availability, model-weight terms, branding restrictions, commercial-use terms and dependencies.

Do not use illicit/stolen-data sources to obtain credentials or unauthorized access. OSINT integration is restricted to lawful/public/authorized data.

Tool categories

Model/inference

vLLM; llama.cpp; Ollama; SGLang; TensorRT-LLM; MLX; Jan; LlamaFile; KoboldCpp; MLC LLM; Text Generation WebUI; Open WebUI.

Agents

Browser Use; Playwright; OpenHands; Cline; AutoGPT; CrewAI; AutoGen; MetaGPT; Agno; Letta; LangChain; LlamaIndex; Haystack; Semantic Kernel; Langflow; Dify; Small Agents.

Research/OSINT

SearXNG; Firecrawl; Crawl4AI; RSSHub; Folo; OpenCorporates; OpenAlex; Zenodo; Semantic Scholar; ICIJ Offshore Leaks; Mindat; Old Maps Online; Open Footprint; IntelX and other user-supplied sources subject to lawful-use review.

Documents/OCR

MinerU; PaddleOCR; Marker; Unstructured; Whisper; Whisper.cpp; Duckling; specialized OCR.

Media

ComfyUI; Diffusers; FLUX; GPT Image; Wan; HunyuanVideo; VACE; LTX; Open-Sora; C-Dance family; FaceFusion; MimicTalk; EchoMimic; FFmpeg; LongCat Video Avatar and other verified video/character projects.

Training

Unsloth; Axolotl; DeepSpeed; TRL; LLaMA-Factory; Megatron-LM; TorchTune; ColossalAI; litGPT; PEFT.

Evaluation

Promptfoo; RAGAS; OpenAI Evals; LM Eval Harness; TruLens; Guardrails; DeepEval; Langfuse; Helicone.

Security

Keycloak; OpenBao; Wazuh; Suricata; CrowdSec; OPNsense/pfSense; WireGuard/Tailscale; immutable logs; SBOM/dependency scanning.

Finance

Apache Fineract; CrystalBank; PostgreSQL; event sourcing; payment/rail adapter architecture; HSM/signing; reconciliation.

Web/CMS

Strapi; Payload; Directus; Wagtail; Publii; Astro; Postiz; listmonk; BillionMail; Novu; Mautic; LobeChat; AnythingLLM; Big-AGI; Cherry Studio; NextChat; LibreChat.

Registry fields

id; exact name; official repository; official website; developer; category; workspace; license; commercial-use status; deployment mode; offline capability; dependencies; hardware; API/account requirement; security scope; maturity; last verified; primary/fallback role; replacement path.

Installer architecture

Each tool is packaged as a version-pinned module/container with health check, smoke test, SBOM, license record, configuration template, secrets requirements and rollback version.

Install pipeline: discover → verify repository/license → mirror source → build sandbox → dependency scan → test → register → expose through authenticated API → monitor → promote or quarantine.
